

1. Current Observations

- Pillar nav and summaries exist (CapeWebBlueprint.js:536-1110) but Pillars 3-11 only expose one module each.
- Activities lean toward generic founder persona (age 25, R0 budget).
- Links skew to national portals; little municipal/provincial branching.
- Quizzes exist but don't change plan or unlock tailored assets.
- No automation to reorder or reprioritize pillars per use case.

2. Identified Gaps (SA context)

- Funding pathways (SEFA, SEDA, NYDA, SmartXchange) not surfaced.
- Township/rural logistics (PUDO, Paxi, informal credit) absent.
- Industry compliance (health, food, building, medical) not referenced.
- B-BBEE scoring + supplier readiness lacks worksheets.
- Limited multilingual or accessibility cues for isiXhosa/isiZulu.
- Cross-border trade (SADC e-commerce, import duties) missing.
- Workforce issues (Bargaining councils, BCEA, COIDA) only hinted.

3. Business-Build Process Adjustments

- Replace static journey with Needs Analysis > Adaptive Pillars > Sprint loops.
- Introduce sector archetypes (services, retail, agri, SaaS, NPO).
- Auto-generate 30-60-90 action maps tied to compliance deadlines.
- Layer township/metro toggles to restructure examples + pricing.

4. Deepseek Integration Flow

- Step 1 Intake: collect founder profile, funding, traction, sector, geography.
- Step 2 Gap scan: Deepseek reviews stored syllabus meta + user data.
- Step 3 Pillar remix: reorder, reword objectives, attach relevant links.
- Step 4 Action feed: push weekly missions, escalate blockers to humans.
- Step 5 Reflection: compare quiz scores vs. targets to re-train plan.

5. Master Prompt for Deepseek

"You are CapeWeb's syllabus strategist. Given USER_BRIEF + PILLAR_LIBRARY, audit fit, flag gaps, rewrite objectives, and output: (a) prioritized 11-pillar roadmap, (b) SA-specific resources per pillar, (c) follow-up questions. Always keep 11 pillars but you may rename, cluster, or repeat submodules to match the business use case. Highlight regulatory, funding, and market nuances relevant to the user's province and sector."

6. Prompt Templates to Patch Gaps

- Legal/Compliance: "Deepseek, expand Pillar 2 for a food truck in Durban covering health permits, eThekwin licensing, and POPIA forms."
- Finance: "Deepseek, rewrite Pillar 9 for cross-border e-commerce using Paystack, Forex, customs VAT, and township lay-by options."
- Marketing: "Deepseek, adapt Pillar 6 for isiXhosa-first audience with WhatsApp Commerce scripts and offline activation ideas."
- Cybersecurity: "Deepseek, update Pillar 8 for a clinic handling patient data under HPCSA and POPIA breach duties."
- CX: "Deepseek, convert Pillar 11 into a service blueprint for field technicians using multilingual chatbots + airtime rewards."

7. Interaction Upgrades

- Dynamic checklists per municipality + trade.
- Skills-gap radar mixing quiz results + declared confidence.
- Resource locker surfaced contextually (templates, calculators, grants).
- Workflow timers that turn learning steps into scheduled actions.
- Shareable PDF/WhatsApp recaps after each pillar.

8. Implementation Considerations

- Store personalization schema (profile, pain points, regulation level).
- Version syllabus metadata so Deepseek can diff and propose edits.
- Cache AI outputs and allow manual overrides.
